# Mayuri Telugu Movie Download [UPD] 720128

---

A: Use single quotes for values which contain spaces: `$f_name = $_POST['f_name']; $f_name = addslashes($f_name); $f_name = "{f_name}";` A: You need to escape any string containing single quotes that you are inserting into the query. `if(($_POST['f_name']!= null) && ($_POST['f_name']!= '')) && isset($_POST['f_name'])) { $f_name = addslashes($_POST['f_name']); $user_id = $this->session->userdata('user_id'); $query = "SELECT * FROM `users` WHERE `user_id` = '$user_id' AND `status` = '1' AND `f_name` = '{f_name}'"; }` Note the usage of `addslashes()` at the start of the query to ensure data is escaped when inserted into the query string. Q: A while loop that runs forever and a block that runs only once - why? I am still making good progress in this app I wrote. I have been using CarlaMiles's app as a guide. The only problem I am having is I am unable to run a while loop that runs forever. I wanted the robot to repeat a message, "Hello!" say, and say it for a long time. I couldn't make it run forever so I thought putting a block on a timer would do the trick. So I used the first time (`doWhileTrue`) block. But the result is that only the block executes once and then the entire loop terminates. Why is this? This is the class: `public class MainActivity extends AppCompatActivity implements NavigationView.OnNavigationItemSelectedListener { //called when a navigation item is selected @Override public void onNavigationItemSelectedListener(Menuitem item) { // update the main content by replacing fragments Fragment fragment = null;`
