"Dieter Schönfliess will be traveling to Munich, where he will be assisting Prof. In the second and third years of life, most children develop a fundamental belief in the existence of a person who is watching them, monitoring them, and/or protecting them. These beliefs are important for children's overall psychological and emotional wellbeing, helping children to develop a secure, meaningful relationship with a perceived protector. After all, to whom do you run when you're in trouble? According to Patrick Loughran, the author of "God's Child: The Source of Children's Belief in God," belief in God or some protective deity is "the natural outgrowth of children's need to have a protector in the early years of life" (p. 18). What is religious fundamentalism? Religious fundamentalism is a belief that dictates a person's religious or spiritual beliefs rigidly, in a way that is difficult to change. Fundamentalist beliefs form the basis of a person's entire life and often are so strong that they are difficult to overcome. Both religious and non-religious people hold fundamental beliefs. However, fundamental religious beliefs are held to a higher standard by the community as a whole, to an extent. When it comes to fundamental religious beliefs, there are two basic groups: 1) those who have a religious upbringing (or already have a religion or spiritual experience), but want to incorporate a fundamental belief in God or a higher power; and 2) those who've never had a spiritual/religious background or experience, and want to incorporate their fundamental beliefs into their own religion or spirituality. Ascribing theological attributes to God and the afterlife are central aspects of fundamental belief. In many ways, fundamental beliefs are a reflection of one's religious upbringing. In order to understand fundamental beliefs, we should begin by considering how the brain develops. The brain can be thought of as being divided into three major parts, as well as the "resting state," or unconscious part, which includes parts of the body such as muscles that are not actively engaged. We can think of the parts of the brain as the "executive part," "executive control 04aeff104c
