Lightroom 5 is a huge upgrade over Lightroom 4 from quite a few angles. While that means a lot of potential for new users and increases in the scope of the software's capabilities, some may not see the value. Keeping that in mind, let's see how Lightroom 5 excels. First, the good does not outweigh the bad in Lightroom 5. It is simply good from almost every angle. Whether you are: a professional **photographer**; a **retoucher**; an **art director** or an **artist**, you will notice that Lightroom 5 is that: a powerhouse. It is faster than ever before. It is easier... ..to use and it is more intuitive. Also, thanks to the additional speed, the plugins and tools, such as that used for **digital retouching**, are able to stay within the boundaries of the Quick Selection tool. This has been a problem in older versions of Lightroom. The downside of Lightroom 5 is what it replaces it with: the **Photoshop CC**.

You can make some tweaks on the edges of the image. Just what do designers do before any project, right? The edges of the image will be fit into the image. Or you can also understand that this is like a digital crop. This will help you to create a perfect picture edging the image in order to fit the image viewer on the computer screen. But what's next for Photoshop? 'Highly-requested' cloud features and AI functionality could be coming. In June 2020, the Elements team met up with Scott Belsky, the Director of User Experience at Adobe, to discuss features people were asking for. According to Belsky, it's a popular request among content creators — especially those working in video — to have a way to view simultaneously edited versions of videos. This kind of collaboration is currently supported in Elements 15 and later, but it's not in the Photoshop software. "We want to have a way of working on [videos] at the same time, which, right now, most people are in video editing mode," Belsky told us. The team received other feedback as well, including more seamless formats for Windows, Android, and iOS — "to bring a similar level of experience to other platforms," Belsky said. Aside from that, Adobe is looking at new features that make it easier and more convenient to use the software within its application. We asked about that. The most enticing (to us) possibility is that Photoshop might adopt AI capabilities, possibly following a similar approach to the company's AI-assisted drawing app—Artboard. An Artboard page at Adobe suggests the software is working out the kinks for the new app.

PARCOR is a leader in collaboration solutions, and the beta release of Share for Review complements the company's evolutionary work with the PARCOR Review panel, a cross-platform collaborative workspace for people who work together on projects. Iterate and review your creative projects with Adobe Sensei, a member of the PARCOR network. The PARCOR Review panel is designed for use in collaboration environments. It supports the operations of the PARCOR corpus - a non-proprietary, freely accessible, joint authored project corpus managed by PARCOR. Share for Review makes it simple to share your work with additional people without leaving Photoshop. The viewer can use either a single image or provide a URL, enabling them to view or annotate your creative work. Share for Review also is part of a larger collection of mobile enhancements including support for 30 languages and new text and object annotation tools. Simultaneous desktop and mobile editing delivers a new experience, where users can edit images on their desktop and then continue editing the same file in a browser-based workspace. These edits are synced seamlessly between the desktop and the browser-based web app. This update will also help users to jump in and collaborate on projects from web browsers or mobile devices far more effectively. It's all part of Adobe's continued innovation in the Creative Cloud. As an example of the new desktop capabilities, Adobe will capture the selection, such as Unsharp Mask, that a user has created to edit an image and then automatically apply this selection to an online photo of a whiteboard. This will enable the

web-based viewer to instantly see, understand and comment on the edit that has been made on the computer.

It can perform complex image analyses at a lightning fast speed. For example, it can analyze entire images to determine the time and cost to process them, and it improves its outputs based on how often a file is processed. This is a radical change from the first versions of Photoshop that relegated users to the necessity of surrendering over 100MB of data for every image they edited. It makes for incredibly powerful new editing options like “Stop Correcting My Mistakes” and the brilliantly named “Wait, Photoshop Is Already Doing That?”.
